

Supported Device list for 3rd party suppliers

Supported devices for 3rd party suppliers

Date: June 2018

The digital experiences produced by BBC Children's have a unique audience. Children tend to use a wide range of devices; from older, less capable phones and tablets to newer devices with higher specifications. To enable us to support this range of devices we require that you enable aspects of the game to downgrade gracefully for less capable devices whilst taking advantage of those with better performance.

The game should provide the best possible experience for users across the below identified range of devices.

The device list is regularly updated to reflect the changing market and will be reviewed and finalised on receipt of Alpha delivery.

Mobile Devices

Apple

Device	OS and Version	Browser	App version
